

# EDrive PSW

Compact high-frequency charger.

## Applications:

Internal logistics  
Cleaning machines  
Elevating platforms  
Electric vehicles  
Golf carts and caddies

The EDrive PSW is the lightest and most compact charger in the high-frequency charger range. If you are looking for a high-frequency charger for smaller applications, the EDrive PSW will most probably be the best choice. This is certainly the case when the power required is no higher than 2 kW. Operation of the appliance is extremely simple. If required one can use different options including the Multiprogrammer Top II with which you can read or program the charger.

## Advantages of the EDrive PSW

- Simple, efficient and **compact** charger
- Suitable for charging both **traditional and maintenance-free batteries**
- Protected against moisture and dust by resin immersion
- Adjustable for **different capacities**
- With extended memory
- With trickle charging/maintenance charging
- Provided with contact for in-built indicator and immobiliser
- In-built models available
- Charging time between 8 and 13 hours

# EDrive PSW options

## Multiprogrammer Top II

With the Multiprogrammer Top II (MP TOP II) you can both **program** and **read** our PSW EDrive chargers. A number of charging curves are pre-programmed for both **traditional or maintenance-free** batteries, with different charging times, etc. The MP TOP II also has an extended memory to store **100 charger memories**. You can then use a USB connection to transfer the memory to a PC to enable a perfect use or failure diagnosis. It is supplied in a sturdy carrying case with space for the cables supplied and includes PC software for the visualisation of the data. External batteries as a power supply are not necessary. The internal battery of the unit is charged by USB computer connection.

## External LED

With a built-in PSW charger the LEDs are not always visible. An external LED can be used in this case. This option requires no extra installation procedure. All that is needed is a **simple plug & play connection**. The LED has 3 different statuses: 'charging', 'charging done', 'deep discharging'. If required one can even use the standard built-in relay in the PSW. This can be used to switch off a consumer.

## Service & repairs

We have a skilled service department which will arrive on-site on your request to assist you as quickly as possible in the event of a breakdown due to battery problems. We then avoid long stoppages and help your employees to get straight back to work again. With less urgent problems you can send us your battery or charger for repair at our workplace. This can be free of charge using our own transport with a following delivery or you can send it to us by courier.
